概 要	Presentations, even in one's native language, can be very difficult (and scary). A major goal of this course is to help students gain the confidence to make short presentations in front of an audience. At the same time, it is hoped that students will be able to increase their English vocabulary in the field (nursing, occupational therapy, physical therapy) in which they study. During this course, students will be giving "mini" presentations almost every week and two longer presentations (that will be about 10-15 minutes).		
到 達 目 標	There are many important aspects concerning how to make good presentations. Some of the topics we will look at will include body language, using PowerPoint, appropriate language, organizing one's introduction, body and conclusion and how to answer questions from the audience.
